PROFILE SUMMARY :

Aspiring DevOps Engineer with hands on experience automating & deploying 3-tier applications on AWS using Kubernetes, Efficient in constructing DevSecOps CI/CD pipelines, provisioning CloudInfrastructure using Terraform & establishing end-to-end Observability with Prometheus, Grafana & Loki

EDUCATION :

- **B.Sc. IT : PTVA's Sathaye College , Mumbai** (2023-2026) CGPA: 8.14
  - Developed College Event Management Website and Dockerized whole application in single docker compose file
  - Handled departmental event as leader for 500+ participants
- **Yojna Jr College , Mumbai** (2021-2023) Percentage : 72 %

TECHNICAL SKILLS :

- Cloud & Infrastructure : AWS (EC2, EBS, IAM, S3, ALB & NLB, EKS)
- IAC & Automation : Terraform, Ansible
- Containers & Orchestration : Kubernetes, Docker
- Operating Systems : Linux (Ubuntu), Bash Scripting , Networking
- CI/CD & GitOps : GitHub Actions , Git , ArgoCD , DevSecOps , Jenkins
- Observability : Prometheus , Grafana , Loki , OpenTelemetry
- Networking & Security : OSI Model , Firewalls , Subnetting & CIDR
- Database : MongoDB

Certifications :

- Certified Devops engineer associate : https://credentials.certdirectory.io/verify/CRD-ANFMJQZM
- 100 Days of Devops : https://engineer.kodekloud.com/certificate-verification/fa11ef72-8b11-4b08-a834-703e46edbf8c

PROJECTS :

- **TaskPilot (Task Management Website) :** [github.com/Kushagra-ghadigaonkar/TaskPilot]
  - Deployed a 3-tier web application from **local development to production** using **Docker optimized images** & **Kubernetes** on AWS .
  - Built a **DevSecOps** CI PipeLine with **GitHub Actions** for automated application testing , container security & image validation using **Trivy** and **SonarQube.**
  - Implemented **Kubernetes HPA** using CPU/memory metrics and configured **readiness and liveness probes** to automatically scale & recover unhealthy workloads in **AWS EKS**
  - Established **GitOps** Based continuous delivery with **ArgoCD**, using GitHub as source of truth for kubernetes deployment configuration.
  - Built a centralized observability stack using **Prometheus** , **Grafana** , **Loki** & **OpenTelemetry** for metrics , logs & traces with **Slack** based alerting
  - Provisioned reproducible **AWS infrastructure** using **Terraform** & automated production configuration using **Ansible .**
  - Configured **Envoy Gatewa**y to publish Webapp publicly on DNS of **AWS NLB**
- **FlowForm (Form Making Website)** : [github.com/Kushagra-ghadigaonkar/FlowForm]
  - Containerized the 3-tier-web application with **Docker Compose** and configured isolated service networking
  - Built **GitHub Actions CI/CD pipeline** using **GitHub self hosted runner** for automated testing and docker image deployment to kubernetes
  - Implemented **Kubernetes autoscaling** for availability and Statefulsets to keep database deployment constant
